1st Quarter 2021

Madrid, June 2021

Statistics on non-performing loans in the 1st quarter of 2021

June 2021

During the first months of the year, the Spanish economy has been marked by the impact of the third wave of COVID-19. This has forced the authorities to impose new restrictions on mobility with a subsequent effect on GDP at market prices, which has fallen by more than 4% in Q1 2021. However, the deterioration experienced by the economy since the outbreak of the pandemic is not yet affecting the doubtfulness of the sector, which has evolved steadily due to the income protection and financial support measures implemented by the authorities.

Against this background, it can be seen that in **the resident private sector** the non-performing loans (NPLs) ratio reached 4.5% in Q1 2021, the same level registered in the previous quarter, and 0.3 percentage points lower compared to Q1 2020, when the state of alarm was proclaimed. Quarter-on-quarter (q-o-q), the outstanding NPL balance (amounting to EUR 54,980 million) registered a slight decrease of 0.3%, which in absolute values did not even amount to EUR 185 million, showing some moderation in the decreasing trend observed since 2014.

Within the resident private sector, the NPL ratio of **loans for house purchase**, the most significant portfolio in absolute terms, remained at 3.1% compared to the year-end quarter, showing by contrast a year on year (y-o-y) improvement of 0.3 percentage points. In the last three months, the numerator of the ratio (the doubtful assets) showed a decrease of 0.5%, to EUR 15,192 million, while the denominator of the ratio (the outstanding balance) increased slightly (+0.2%) to EUR 488,594 million. The doubtful balance has accumulated a y-o-y drop of more than EUR 1,649 million (-9,8% in relative terms), but still below the levels observed during the two years preceding the pandemic.

The slight decrease of the doubtful exposures over the last 12 months (-0,8%) and the sharper credit drop (-5,6%) translated into a 0,3 y-o-y increase of doubtfulness in the **credit for housing renovation** in this first quarter of 2021, to 5.5%. Compared to the previous quarter, NPL ratio showed virtually no variation due to the effect that the decrease in both doubtful assets and the outstanding balance in a similar proportion had on the coefficient.

Still within the household portfolio, it is observed that non-performing loans in **consumer credit**, which in general have been maintaining a less favourable behaviour, increased

this quarter both y-o-y and q-o-q, from 5.0% the previous year or 5.1% from the previous quarter to the current 5.5%.

As for the **exposures linked to the real estate sector**, the downward trend observed in the last 8 years is maintained, despite the fact that doubtful assets were reduced to a lesser extent due to the impact that the pandemic has generated in secondary debt settlement markets, which are expected to restart their activities throughout the year. The NPL rate has gone from 5.2% in Q1 2020 to 4.8% a year later. This improvement is also q-o-q, with NPLs accounting for 5.0%. **The credit to the construction sector** was also seen in this context of gradual improvement, after a reduction in its rate of 2.3 percentage points in the last 12 months and 0.1 points in quarterly terms, to 9.1% in Q1 2021. Both portfolios showed the favourable performance they have together experienced, especially if we consider the evolution over the pre-pandemic years, when the sale of NPL portfolios intensified within an expanding cycle. In total, under these two headings there are currently recorded in the system NPLs accounting for EUR 6,458 million, which barely represent a tenth compared to 2013, when companies in the construction and real estate development were particularly hard hit.

This crisis, unlike the previous one, has been caused by an exogenous element and, although its economic implications are serious -especially for businesses and more specifically for those with greater exposure to tourism and hospitality sectors-, forecasts for this year and the next one point to a growth path. This should make it possible to largely neutralize the risks associated with these sectors on the balance sheets of the entities. It is possible that, in the coming months, NPL rates will be weakened, as moratoriums expire (a large part of them are expected to expire in Q2 2021) and the rest of the fiscal stimuli that mitigated the negative effects of this crisis are gradually withdrawn. However, the favourable impact on NPL rates of the better economic prospects should offset the above and by extension it is hoped a better performance than initially anticipated.
